CAR CARE COUNCIL RECOMMENDATIONS

The Haselwood Auto Group vehicle service recommendations are based on the recommendations of, the vehicle manufacturers, the Car Care Council, AAA and our own experience in servicing vehicles in our local market area. The latest survey conducted by Car Care Council (April 2015) found the following:

- 25% of the vehicles examined had low or dirty engine oil
- 13% of the vehicles examined had low or contaminated brake fluid
- 18% of the vehicles examined had dirty engine air filters
- 17% of the vehicles examined had inadequate cooling protection or low coolant levels
- 16% of the vehicles examined had the need of one wiper blade
- 27% of the vehicles had low or contaminated windshield wiper fluid
- 18% of the vehicles examined had the need for one or more drive belts
- 89% of the vehicles examined were in the need of at least one of these services

The Care Care Council and some of the most recognizable vehicle maintenance guides suggest vehicle inspections every 4 months or 4,000 miles. The Haselwood Auto Group recommends these same intervals but most importantly believes in conditioned based maintenance. Conditioned based maintenance is letting the vehicle tell us when to make recommendations based upon the way you drive your vehicle, where you drive your vehicle and under what conditions. Therefore, every time you bring your vehicle in for service we will perform a complimentary multi point vehicle inspection of your vehicle.

INTERMEDIATE SERVICE EVERY 4,000 miles or 4 months
